

CradlePoint Connectivity Enables HealthCare Professionals to Enhance In-Home Patient Care CBA250 Router Supports Intel® Health Guide System Through 3G and 4G Broadband Technology

CradlePoint Technology, the global leader in 3G and 4G network solutions, now offers connectivity for the Intel® Health Guide System, a next-generation remote patient monitoring solution. Specifically, the CradlePoint CBA250 Cellular Broadband Adapter provides 3G connectivity for the [Intel® Health Guide PHS6000](#), which remotely measures vital signs, conducts videoconferences between patients and healthcare professionals and delivers multimedia educational information on demand – all from the patient’s home.

“CradlePoint is proud to be working with Intel® as a connection partner to deliver an evolution in health care that enables doctors and patients to maintain a close relationship regardless of location,” said Ken Hosac, Director of Product Marketing for CradlePoint. “When it comes to monitoring personal health, the immediate needs that come to mind are reliability and security of information. CradlePoint products deliver in both areas, making the CBA250 a natural choice for the Intel® Health Guide System.”

Connecting the health monitoring functionality of the Intel Health Guide with the reliable connectivity of the CradlePoint CBA250 illustrates how remote monitoring can improve quality of life and increase the efficiency of a healthcare system facing many challenges. The in-home patient can reduce some of the related costs and number of visits to the doctor while maintaining the appropriate level of care. Meanwhile, healthcare professionals can access critical patient information according to their demanding schedules.

Depending upon the need and configuration, the CBA250 can provide the primary connection for the Intel® Health Guide PHS6000 between patient and healthcare professional or be used to provide a 3G redundancy in case of network failure. The CBA250 is also in use across a number of industries that need reliable access to remote data, ultimately providing opportunities to become more efficient and enhance overall business operations.
