

Helping Companies use mobile data more effectively

Benefits

- Remote configuration
- Reduced support and costs
- Messaging, alerts and broadcasting
- Status indicators and warnings
- Data protection and assurance
- Help desk fix and recovery
- In built security and authentication
- Data compression
- Auto data capture

With so many choices and options, there is no doubt that customers are overwhelmed with how to best manage mobile data communications.

While sophisticated customers can cope with the requirements for advanced solutions, most companies want easier ways to make mobile work with less effort. With experience from around the world, M3 Mobile has introduced on board MCS software to deliver this capability.

Business potential from mobile data is well proven but implementation, support and complexity slow projects down and impact user confidence.

With MMP onboard the M3, we deliver an out of the box capability to help companies get started with the controls and features they need.

- Full device registration, application profile and remote management;
- Hosted Operator Console for user support, remote diagnostics and recovery;
- Device status indicators that eliminate confusion and frustration.

The result – dynamic Mobile Asset Management.

MMP protects and enhances investment in mobile business solutions to help companies optimize the potential from mobile data for the long term.

Remote Device Management

Connectivity

- IP based wired/wireless LAN/WAN support
- 2G - GPRS, EDGE, IRxTT, EVDO
- 3G - UMTS, HSDPA, HSUPA

Real-Time Everything

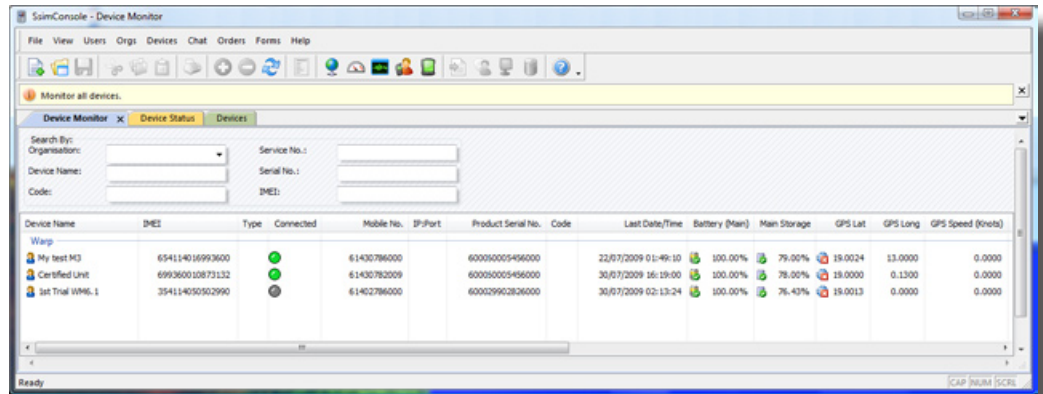

- Remote device profiling
- File transfer including remote installation
- Remote screen captures
- Asset identification

Security, Safety

- 256 bit encrypted communications, memory and storage
- 2048 bit RSA keys
- Device and SIM card authentication
- Device lock-down
- Remote warm/cold reset

Data Collection

- Automated stats including battery, memory, calls, GPS location, SIM card & owner details

"Support staff can easily view and control the device remotely without user intervention..."

Fast...

All messages & data sent real-time.
Real-time compression to reduce costs & time
Optimised for cellular networks

Dependable...

Robust networking and connectivity
Guaranteed message delivery
All transactions fully logged

Simple to Implement & Deploy...

Lightweight, embedded client
No configurations, no setups, no confusion
No external or third party dependencies

Secure...

RSA based 2048 bit encryption
Embedded VPN that's firewall friendly
Database and memory AES 256 bit encrypted

SSIM Console

- Device visibility across your network - on ANY IP network
- Reduce support costs
- Remotely manage device usage, statistics and performance
- Transfer files, data, applications and images safely, without the threat of malware
